

Etinosa Ogbevoen

Frontend Engineer | React · Next.js · TypeScript | Fintech, Web3 & AI Systems | 5+ Years Experience

▪ Email: ogbevoenetinosa@gmail.com ▪ LinkedIn: [linkedin.com/in/etinosa-ogbevoen](https://www.linkedin.com/in/etinosa-ogbevoen)
▪ GitHub: github.com/Jheff4 ▪ Portfolio: etinosa.vercel.app

SKILLS

Programming Languages: TypeScript, JavaScript, Python, Solidity, SQL

Frameworks and Libraries: React, Next.js, React Native, Expo, TanStack Query, Redux Toolkit, Zustand, Jotai, GraphQL, React Hook Form, Zod, Tailwind CSS, Framer Motion, Storybook, Drizzle ORM

Tools and Technologies: Node.js, Express, Convex, WebSockets, AWS (Lambda, S3, DynamoDB, SES, Secrets Manager, API Gateway), PostgreSQL, Docker, GitHub Actions, Vercel, Render, Playwright, Vitest, OpenTelemetry, Sentry, Datadog, New Relic, PostHog, Wagmi, Viem, Foundry, Git

AI / LLM: Vercel AI SDK, Gemini, OpenAI, retrieval-augmented generation (RAG), embeddings, vector search, prompt engineering

Engineering Practices: Testing & quality (unit testing, axe-core accessibility, e2e/integration coverage), security, documentation (ADRs, post-mortems, engineering handbooks), CI/CD, branch protection, production observability

WORK EXPERIENCE

Apr 2023 –
Present

Lead Frontend Engineer

Razor Labs, Remote

- First engineer on frontend from first commit to 1.47M+ users, leading three production Web3 products on the Movement blockchain — the ecosystem's first DEX (swap, liquidity pools, lottery; 32M+ swaps, 50M+ transactions), a browser-extension wallet, and an iOS/Android mobile wallet — owning architecture and UI consistency across all three codebases.
- Set frontend architectural standards and shipped the reliability layer behind them: an RPC failover system (health checks, retry/timeout, fallback selection) that keeps wallets live through provider outages, full wallet flows (account generation, network switching, secure storage, transaction-lifecycle tracking), and Razor Kit, the open-source MIT-licensed wallet-connection kit (100% test coverage) now standard across the Movement ecosystem.

Jul 2025 –
Dec 2025

Software Engineer

Geoscape Limited, Remote

- Architected an automated email management platform that listens for, processes, and routes incoming customer requests, with a provider-agnostic AI intent-classification layer on the Vercel AI SDK categorizing sales, support, and other intents to drive pre-defined agent assignment.
- Designed fault-tolerant backend APIs with validation, integrated with an internal CRM and agent dashboard for real-time monitoring and full conversation-lifecycle tracking.

Mar 2024 –
May 2024

Frontend Engineer

Movemint, Remote

- Built the NFT marketplace frontend — minting, listing, and purchase flows with wallet-connection and live transaction-status states, plus collection browsing, search, and filtering for discovery.
- Handled on-chain edge cases (pending, failed, and rejected transactions) so a dropped mint never left the interface in a broken state.

Oct 2023 –
Dec 2023

Frontend Engineer

Lensly Finance, Remote

- Built the complete frontend for a DeFi lending protocol — supplying assets, borrowing, repaying, and managing collateral positions.
- Developed dashboards visualizing lending pools, borrowing positions, collateral ratios, and protocol stats.

Nov 2022 –
Nov 2023

Frontend Developer

Andex Protocol, Remote

- Built the DEX protocol interface and contributed to the browser wallet-extension frontend, covering wallet interaction states and transaction interfaces.
- Built reusable UI kits and shared component libraries used across the protocol's products, connecting smart-contract logic to frontend transaction flows.

May 2018 –
Aug 2021

Early Career — Trainee & Intern

Zuri Team (2021, Remote) · Computer Training Institute (2018–2020, On-site)

- Full-stack training in Git-based agile workflows, shipping Hagggle, a team e-commerce capstone, end to end; earlier, built desktop applications in Visual Basic / .NET and web pages in HTML/CSS.

SELECTED PROJECTS

Sportz — Real-Time Multi-Sport Broadcast Platform

- Built a full-stack real-time broadcast system delivering live scores and ball-by-ball commentary at sub-second latency via room-scoped pub/sub, heartbeat-based connection reaping, and exponential-backoff reconnect, with server state unified as a single source of truth.
- Shipped it production-grade: 95 backend unit/integration tests against real databases and live sockets plus e2e accessibility scanning, end-to-end tracing across browser/backend/database, API hardening (rate limiting, bot detection, schema validation), and CI/CD with per-PR preview deploys.

Stratos Wallet — Production-Grade Fintech Wallet Frontend

- Designed a ledger-first financial data model (append-only ledger, derived balances) with contract-first codegen, optimistic mutations with cache-snapshot rollback, and idempotency keys on every money-moving operation.
- Built a custom socket reliability protocol (sequence numbers with gap detection, event deduplication, missed-event replay on reconnect) and a chaos harness of 18 failure presets proving the UI degrades gracefully, not just on happy paths.

Echo — Multi-Tenant AI Customer Support SaaS

- Built an embeddable AI support widget with full organization isolation, real-time conversation management, human escalation workflows, and a retrieval-augmented generation pipeline.
- Implemented production security boundaries: tenant-scoped authorization and a plugin architecture storing only secret references while credentials live in a managed secrets store.

EDUCATION

2017 – 2022

Bachelor of Engineering — Mechanical Engineering, University of Benin

CERTIFICATIONS

Full Stack Software Development (Zuri Team Inc) · Web3 Blockchain Development, Wallet Security, and Foundry Fundamentals (Cyfrin Updraft) · Advanced Foundry (Cyfrin Updraft, in view)

VOLUNTEERING & LEADERSHIP ACTIVITIES

1. Software Development Mentor, 3MTT Program (2024) — mentored 30+ developers through real-world project builds and live debugging sessions.
2. Conference Speaker (2025) — delivered a talk to secondary school students from 20+ schools on leveraging technology.
3. Technical Documentation & Knowledge-Sharing — author of engineering handbooks used as onboarding resources for other engineers.
